Report on World Environment Day - 5th June 2024

This year, World Environment Day (WED) 2024 is centered on the critical themes of land restoration, halting desertification, and enhancing drought resilience, encapsulated in the slogan "**land restoration, stopping desertification, and building drought resilience.**"

To mark this occasion, the Department of Community Medicine orchestrated an event where students, interns, and staff of Community Medicine Department engaged in planting saplings. The event served as a platform for participants to pledge their commitment to safeguarding our planet for a sustainable future, emphasizing the importance of collective action in environmental conservation efforts.
